An Abstract of the Tide Table with the age of the Moon shewing the houres & minutes of full sea at London Bridge, as also at *Tinmouth*, *Hartlepoole*, *Whitebay*, *Amsterdam*, *Gascoigne*, *Brittain*, *Galitia*. & the places adjoyning every day this year. 1644

The age of the ☽	Inc.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
	dec.	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
Ful Sea at Lond.	ho.	3	4	5	6	7	7	8	9	10	11	11	12	1	2	3
	mi	48	36	24	12	0	48	36	24	12	0	48	36	24	12	0

The use of tables is very easie. Example, knowing the day of the Moneth, I seek it on the other side, and over against it under the Moneth you have the age of the Moon, which found here, you shall have the time of full Sea at London Bridge, &c. more plain thus: Over against the first day of January, I find the Moone to be 2 dayes old increasing, which I seek in this abstract and find it joyned with 17 the age of the Moon decreasing, Both which dayes the Moon makes full sea at London Bridge at a like time: now under these two ages of the moon I finde 4 houres 36 min. which note that the said first day of January, the Moon being two dayes old and the 16 of January being 17 dayes old, It is full Sea at London Bridge, &c. At 4 of the clock and 36 min. past in the morning, & afternoon you must note, that every tide altereth 24 min. of time, so that the afternoon Tide is 24 min. later then the morning Tide. Doe thus with any other place, as the Tables direct you, and you shall finde it so easie, that unlesse you have manus sub pallio, or pleade ignorance, you will neede no further directions.

Yet you must observe that it floweth one point of the Compasse more in the Spring tides, that is, at the New and Full Moones, than it doth at the Neap tides, that is, at the quarters of the Moone, especially if it bee a River where there is any indraught, and that is of good distance from the Sea; yea when there is neither rage of windes, land-floods, nor other cause to produce or hinder the said effect; As for example, It is full sea at London-bridge at the New or Full Moone, when she is South-west or North-East but in the quarters of the moon it scarcely floweth there when the ☽ is S. W by S. or N E by N. And by reason of the many Arches London-Bridge standeth on, it floweth 5 how. ebbeth 7 causing the Tide to differ an howre, or be sooner an howre then this Table giveth in the full sea, though most of the other places it is 6. ho. flood, & 6 ho. ebb. Land floods, Great Winds, & the forcible aspects of the planets to the moon much alter the Tide, And if the ☽ have North latitude she swelleth the Seas the sooner, but South she raiseth the Sea later.

January hath xxxi. dayes.

First Quarter 6 day, half an houre past 2 afternoon ♄♀♂☽ rule.
Full moon the 13 day 34 minutes past 9 at nighr. ♄♀ Lords
Last Quarter 22 day, at 2 e clock in the morn. ♂☿♀ domineere

The Julian or English Account

Mars kindle Coal, portends some stirrs near grow-
And *Iupiter*, that fire is too oft blowing. (ing
The high ways dangerous, and the words *Stand*
Deliver, *Mars* the Ruffian doth command,
Saturne and *Venus* joyne, and say that home
Is much more better then in myre to Rome.

The Julian, or English Accopt.	The Gregorian or Roman accompt.	The true accompt to the yeare 1734
Young *Venus* chides Old *Saturne*, hee's in's fall,		
And in disgrace, seeking for ayd from *Mars*,		
Mars gives him entertainment, and with all		
Pernicious counsell, raising civill Jarrs:		
This Moneths last day the two *Malignants* meeting		
Doe *Altimech* oppose: an unkind greeting.

The Julian, Englith account

The Julian, English account		The Gregorian or forreign Accom.	The true Accom. to the yea. 1734
	Saturn afflicts the Sun, producing tears,		
	Putting our Countrimen in doubts and fears		
	And Mercury with Sol in Cancer met		
	Unto their greif doth much augment the wett		
	Peace-making Jove doth now shake hands with *mars*		
	God send fair weather, and an end of warrs.		

July 5. 1645. h. 1½ Kanotha ishti. & stay 7. h. 6 p. post midnoctia.

The 27 day, in the south & by east at 3 a clock in the morn is a corporal conjunction of *Mars* & Jupiter in 28 degrees 18 min. of ♉ ♃ is in the south: ☿ newly risen: An early riser may behold ♅ elevated 7 min. above *Mars* & the 7 stars a little above them near the south: This conjunction promiseth victory over those under *Taurus*, which I pray God grant And send us peace.

This Conjunction was not till about d. 27. h. 16.

Auguſt hath xxxi. dayes.

Full moon 8. day, 26 minutes paſt 2 in the morning, ♄♅☉♂ Lords.
Laſt Quarter 14 day, 46. minutes paſt 6 in the evening. ☿♅♄ rule.
New moon 22 day, at 5 a clock in the morning. ☿☿☽ Chiefe.
Firſt Quarter 30 day, 53. minutes paſt 8 in the morning ♄☿☉♀☽ rule
The 22 day the Sun Eclypſed at his riſing but not viſible in England.

This moneths Lunations, *Saturne*'s prone to wrangle
At Full Moon hee att'aines the Southerne Angle
At her last quarter hee arives the East
And at the moneths end he goes down it'h West
Just then when *Mars* afflicts both Moon and Sun
Take heed of Pirates, high way Robbers shun.

The Julian, or English Accompt

The Jovialists doe suffer detriment,
Saturne, Mars, Sol and Venus in their fall
Foreshew variery of discontent
For Hermes playes his pranks amongst them all
But God still keeps his, from sword, famine, fire
And all the plotts, that all their foes conspire.

The gregorian, or Roman accompt the true accopt to the year, 1734

The Iulian, or English accompt

This moneths fift day, ſhall never be forgot,
The Pouder-treaſon, or the Papiſt's plot
To blow up King and Parliament; ſtill we ſee.
And ſtill we find, they work more treathery
Againſt poore England: But the doome's at hand
To purge the Romiſh rout, out of the Land.

The gregorian, or Roman accompt

A Description of the severall parts of the ALMANACK for this yeere. 1644.

IN the first Columne is placed the Goulden Number so called, for the excellent use it hath in finding the Change of the Moone. This yeare it is 11. And in this my Kalender is noted in a Red Character or figure over against such a day of the moneth as the Moone changeth on, The next yeare it will be 12. increasing one every yeare till it be 19. and then returns to one againe; So that for three Centuryes of yeares you may know the day of new Moone by knowing the Goulden Number: But of this I wrote in my Prognostication 1641. and God willing intend to write more hereafter.

The second Columne is the dayes of the moneth.

The third is the dayes of the week: G F being Sunday letters, because it is Leap-year, G serving from the beginning of the yeare to the 25. of February, and then it changeth to F so continuing all the rest of the yeare.

The fourth is such Holy-dayes as are in use with us:

The places of the Planets, viz. Signe and degree on such a day at noone as they are noted on, their Orientalitie, that is, when they may be seen before Sun-rising, their Occidentalitie, that is, when they may be seene after Sun-setting, &c.

The fifth is the Moones place, or signe and degree she is in every day of the yeare at noone.

The sixth is the houre and minutes of Sun-rising at London, by help whereof may be known, the time of Sun-setting, the length of the day and night, every day and night in the yeare: for if you double the houres and minutes of Sun rise, you will have the length of the night.

If you substract the houres and minutes of Sun-rising from 12. houres, the remainder will be Sun set.

If you double the houres and minutes of Sun set, you will have the length of the day.

Observe that 60. minutes make an houre, 45. minutes is three quarters of an houre, 40. minutes is two third parts of an houre, 30. minutes is halfe an houre, 20. minutes

The Donation of the Moon in Mans Body, passing under the 12. Zodiacall Constellations.

The seven Planets { ♄ Saturne, ♃ Jupiter, ♂ Mars, ☉ Sun, ♀ Venus, ☿ Mercury, ☽ the Moon } { Post, Proxima } SIM SVM Lunæ sequitur subest.

A Description of the severall parts of the ALMANACK for this yeere. 1644.

IN the first Columne is placed the Goulden Number so called, for the excellent use it hath in finding the Change of the Moone. This yeare it is 11. And in this my Kalender is noted in a Red Character or figure over against such a day of the moneth as the Moone changeth on, The next yeare it will be 12. increasing one every yeare till it be 19. and then returns to one againe; So that for three Centuryes of yeares you may know the day of new Moone by knowing the Goulden Number: But of this I wrote in my Prognostication 1641. and God willing intend to write more hereafter.

The second Columne is the dayes of the moneth.

The third is the dayes of the week: G F being Sunday letters, because it is Leap-year, G serving from the beginning of the yeare to the 25. of February, and then it changeth to F so continuing all the rest of the yeare.

The fourth is such Holy-daves as are in use with us: The places of the Planets, viz. Signe and degree on such a day at noone as they are noted on, their Orientalitie, that is, when they may be seen before Sun-rising, their Occidentalitie, that is, when they may be seene after Sun-setting, &c.

The fifth is the Moones place, or signe and degree she is in every day of the yeare at noone.

The sixth is the houre and minutes of Sun-rising at London, by help whereof may be known, the time of Sun-setting, the length of the day and night, every day and night in the yeare: for if you double the houres and minutes of Sun rise, you will have the length of the night.

If you substract the houres and minutes of Sun-rising from 12. houres, the remainder will be Sun set.

If you double the houres and minutes of Sun set, you will have the length of the day.

Observe that 60. minutes make an houre, 45. minutes is three quarters of an houre, 40. minutes is two third parts of an houre, 30. minutes is halfe an houre, 20. mi-

nutes is one third part of an houre, and 15. minutes is a quarter of an houre, And observe further,

So many minutes as the sun riseth before 4.5.6.7.8.9. } a clock.
So many minutes hee setteth after 8.7 6.5.4.3. }

As for example, the Sun riseth at London, the first of January at 8. of the clock and 2. minutes, That is, 58. minutes before 9. of the clock, therefore he setteth 58. minutes past 3. of the clock, the rest is so easie, Example is needlesse.

The seventh Columne is a probable Conjecture of the weather, and other Astrologicall observations, gathered from the motions of the Stars and Planets, with the old, and some of the moderne Aspects and Conjunctions most forcible this yeer, with the houre when such Conjunctions and Aspects happen, observing that (a) stands for afternoone, (b) before noone, (m) morning, and (n) at night in this my Almanack.

On the other (or right hand) Page, is the forraigne or Roman Accompt, being ten dayes truer then ours; To which is joyned the true Accompt, being 12. dayes, and certaine houres, minutes, and seconds before, and truer then ours, which indeed it should be, and will so continue to the yeare 1734. if the world last so long. But this requires a more exact Astronomicall reformation; For every yeare the Æquinoxes and Solstices doe change their places, or go backwards 10. minutes and 48. seconds, and every fourth or Leap yeare they doe Anticipate 43. minutes, 12. seconds; so that in 134. yeares, the Æquinoxes and Solstices doe goe backward 24. houres, 6. minutes, 52. seconds, That is to say, A whole day and somewhat more; And by this Calculation, in 1644. yeares, there are 12. dayes 7. houres, 52. minutes, and 22. seconds gone backe: but of this God willing another time.

A definition of Astrologie.

Astrologie is an Art which teacheth by the Motions, Configurations, and Influence of the Signes, Stars, and Cælestiall Planets to Prognosticate of the naturall effects and mutations to come in the Elements, and these inferiour and Elementary Bodies (This definition I have borrowed from Sir Christopher Heydon, Fol. 2. Which neither Picus, nor Chambers if he were alive, nor the greatest Adversaries this day living are able to answere, And yet a late Author hath made very weake assaults in a Treatise he calls Astrologomania, If any have abused the Art, they

they are old enough, let them answer for themselves. This definition containes not onely the causes which concurre to the Constitution of the nature and essence of Astrologie; but besides expresseth the end, or finall cause whereto all the precepts of the Art are to be referred, And it is divided into two parts: The one Speculative, Theoricall, or Astronomicall, which consisteth in the knowledge of the heavenly motions. The other part (without the which the first is also much vile, but as the knowledge of the simple Botanologians, or Herbarists, who coming into a curious garden, can perhaps give you the names of the severall plants, and flowers therein growing; but (without their further skill in Physick) cannot describe their vertues, nor apply them to the benefit of mankinde) Is the Practick (or the too much abused) Astrologicall, Iudiciary part: for as the former being conversant about the subject of this Art doth furnish the Astrologian with matter wherein to exercise himselfe; so this other disposeth this matter; and accordingly iudgeth as the case doth require: This practick part is likewise subdivided into two parts, As Ptolomy lib. 2. Quadrip. saith; The first considereth the generall state of the world, and by Eclipses, Comets, great Conjunctions, annuall Revolutions, quarterly Ingresses, and Lunations, and by the Rising, Culminating and setting of the fixed Stars, togsther with the occurse of the Planets both to the Sun, and amongst themselves, doth yearely iudge of all sensitive, and vegetative things whatsoever living in the aire, water, or earth, of health, plagues, plenty, dearth, mutations of the aire, warres, peace, and other like generall accidents of whole countreyes, provinces and cities; The other of these subdivided parts is particular, and respecteth onely the private state of every singular man, of which at this time I shall not insist, but only apply my selfe to the former, amongst which is comprehended Annuall Revolutions, and quarterly Ingresses, &c. Wherein I have collected out of Ptolomie, Haly, Guido Bonatus, and other learned Authors Astrologicall ancient and moderne, such observations as are applicable to this present yeare.

Invidys Invidentium.

Of the Spring.

THe Spring takes beginning at the Suns entrance into the first scruple of Aries, which is at London this yeare 1644. on Saturday the ninth of March, 25. minutes past 9.

of the clock in the night, at which time the fifth degree of the Malignant signe Scorpio doth ascend, and Mars Lord thereof neere the north Angle afflicts the Moone by opposition, who is in the mid-heaven very neere the Royall Star Cor Leonis: Mercury who is Quasi Dis Conciliarius is unhappily placed with Caudæ Draconis, is retrograde, and in the fall, yet howsoever the Sun himselfe is oppressed by the presence of the malitious Planet Saturne; yet the two Benevolents Iupiter and Venus are chiefly met, which is to be hoped will much abate of the evill influence of the other Malignant stars; But to come more neere to Astrologicall observations, Mars is found to excell in dignities all the other Planets, by a great proportion. In Coelum Mars, Sol habet. For he hath 99. dignities, Iupiter 42. Saturne 37. Mercury 38. Venus 7. the Sun 19. and the Moone 12. therefore deservedly he is Lord of the yeare, and beares greatest sway especially this quarter, but most this May, and the first halfe of June. Cardan saith, Aphoris. 78. Cum fuerit Mars Dominus Anni, significat Æstus, Incendia, fulgura, Grandines, et Bella, sed quia in domo Saturni parum pluet, sed cum in revolutione anni ad Solis ingressum in Arietem, in 3. domo in fine ejus, Inimicitias, et odia auget, et Idolatrates passim disturbat; Et quia prope 4. domum, et Luna noviter defecta est ab ejus oppositione in humano signo, Venenatam suam naturam sursum dirigit, et planetas inficit, et copiosas sanguinis effusiones; ex litibus et bellis, presertim circa exitum anni præmonstrat. Thus farre Haly in libro 8. cap. 7. And these things to happen in the Northerne place in the latitude of 53. and 54.

In the new Moone Preventionall which was on the 27. of February, he was in the fifth house, which as the said Author saith, Prægnantibus Damna, Abortus, et Graves labores minatur. And if you would know what his position (in the full Moone Postuentionall, which is on the 14 of March) doth forethow in Domo Regia the tenth house, Read the same Author, and he will tell you.

Iupiter hath the next prehemineuce to Mars, and his position at the Suns ingresse into ♈ in the fifth house as the same and other Astrologians say, Fortunat statum servorum, et Quadrupedum. And so much the more, because hee is happily joyned with Venus, Aerem temperat, et ventos Septentrionales efficit. In the new Moone preventionall he was in the eighth house, Minuens significationem mortis: And in the full Moone Postuentionall in the eleuenth house, Augens fortunam et splendorem vitæ et inopinata tribuit dona, locis et populis subjectis, ♈ et ♉.

Saturne challengeth the third place, who at the Suns entrance

trance into ♈, is combust of the Sun in the fifth house, and in his fall, Damnum multis, et molestiam a liberis nuncians, et contentionem cum legato quoddam. In the new Moone Preventionall he is in the seventh house very neere Venus, who is almost in the eighth, and both very unfortunate, signifying Mortem mulierum, et Animalium Quadrupedum, And at the full Moone postventionall hee is in the eleventh house, the Moone separating from the opposition of the Sun to his opposition, causing an opening of the gates of heaven, to cold raines, sleet, or snow and haile, and a troubled unwholsome aire; Et ludit spem multorum et expectationem, Afferrque mala, et Anxietates.

Mercury hath the fourth place, hee at the Suns ingresse into ♈ being unhantily placed in the end of the fourth house in his detriment, and very nigh the Dragons taile, and retrograde; Nunciat carcerem scribis, et præfectis ærarij, et lædet prægnantes, ut vel abortum patiuntur, vel ad partum non perveniant. In the new Moone preventionall he is in the seventh house, Vbi concubitus illicitos cum pueris, et mulierum aversationem designat. At the full Moone postventionall, hee is in the end of Medium Cœli unfortunate, Detinens scribas et doctos viros ab honoribus, præfecturis, et muneribus publicis civitatum. Thus farre of the principall significators of the yeare in this Spring Quarter, which continueth from the Suns entrance into Aries, untill he hath passed through it, Taurus and Gemini, which ends on Munday the tenth of June at 46. minutes past 12. of the clock in the night. At which time.

The Summer.

TAkes beginning the glorious Lamp of heaven, entring the first minute of Cancer; The three grand Superiors planets, Saturne, Iupiter, and Mars, are Orientall of the Sun, and neere the Angle of the East; for Saturne is newly risen, fierce Mars is in the very Cuspis of the Horoscope, and bright Iupiter about an houre after riseth neere the seaventh starre; so that the Ascendent is blessed of the two Malignants Saturne and Mars: At this time the Moone is in her detriment in the Mid-heaven, separating from the opposition of the Sun to the Quartile of Saturne, which without doubt produceth Apertionem Cœlorum, causing dark and rainie, and unnaturall weather (the season of the yeare considered) to follow, which is adiunated by the Quartile of Saturne and Mars to Mercury, bringing with it likewise stormes of raine, haile, thunder and lightnings, with Coruscations,

vulcations, And although the benevolent and Ayre-clearing Iupiter be Lord of this Summer quarter, yet Mars as he is Dominus anni, is his Copartner, and indeed of equall power, and therefore is joyned with him in Commission; As for Iupiter according to the said Haly, lib. 8. cap. 7. he being in the Ascendent in Signo intercepto at the Suns ingresse into Cancer, Sanitatem, Gaudium, et multa lucra aliquibus Religiosis promittet, qui sunt sub Tauro, sed quidam magnates plus de suis quam populi commodis solliciti erunt. In the full Moone Prevcutionall hee is in the eleventh house, and denotes the same which was spoken in the full Moone Postventionall in the Spring quarter, And in the new Moone Postventionall which happens on Midsummer day, he is neere the twelfth house, Vbi promitit vtilitatem, et lucrum ex litibus, et spolia ab hostibus.

Mars (a sharer with Iupiter) at the Suns ingresse, as I said before is in the Ascendent in 26. degrees of Aries, newly seperating from the Coniunction of his fellow Nature-killing Saturne. To both whom, Mercury casts his Quartile Aspect, which is of ill signification, and will manifest it self in the East and South parts. In the full Moone Preventionall he is in the Mid heaven, then which nothing can be worse and in Coniunction with Saturne. In the new Moone Postventionall, he is in the eleventh house in his detriment, Vbi societates hominum tollit, eosque leviſſimi de causa ad discordiam, ut neuter alteri fidat impellere censetur. Looke in Haly, lib. 8. cap. 7. for Saturne and Mars their position in the Mid-heaven, in Domo Regia.

Saturue at the Suns entrance into Cancer is in the end of the twelfth house, where the Dragons taile is likewise (in signo intercepto) Saturne having beene lately in Coniunction with Mars, and in Quadrate of Mercury, Ad litigia et mutuæ odia provocat homines, damnaque et infortunia inde exuscitat. In the full Moone Preventionall which is the tenth of Iune, he is mounted in the tenth house; but yet hee is in his fall, and Mars hath newly left him. Malum portendet ex frigiditate, et infortunio, quod totam terram premet, Ipsiq; adeo Reges loca mutabant mala multa facient, et tributa iniqua populo imponent. Thus Haly saith in lib. 8. cap. 7. In the new Moone Postventionall hee signifies the same which is remembred in in the opposition Postventionall in the Spring, Howeverwhat is here spoken of Saturne will be of little effect, by reason his debilities this Quarter exceed his dignities, Vnde in sinu manum habet.

Of

Of the Autume or Harveſt.

THe Autumne or Harveſt takes beginning on Thurſday the twelfth day of September 21. minutes paſt 3. a clock after noone, at which time the Royall Sun enters his fall in the firſt minute of Libra in the eighth houſe, where Venus is likewiſe in her fall, in Quartile to Mars and the Moone, cauſing an Apertion of the gates of heaven, Saturne hath 36. dignities, Mercury 34. Venus 19. Mars 21. But Saturne with Mercury beare greateſt sway. Theſe two are in oppoſition, and the Moone in reſpect of longitude is in exact Coniunction of Mars in the ſixth houſe in 24. degrees of Gemini, but the Moone having 5. degrees of South latitude, is very neere ſo much under Mars.

Duplex Cappa.

The Sun & Iupiter have little power but by reaſon of their Trine Aſpect in aire ſignes, as likewiſe the oppoſition of Saturne and Mercury, who is in an aery ſigne, and the ſaid Coniunction of Mars and the Moone in Gemini all aery ſignes. This Quarter is very likely to produce moſt verie vehement and ſtrong windes; as for the poſition of Saturne at the Suns ingreſſe being in his fall, in the ſecond houſe, Retrograde, and in oppoſition to Mercury, Diminutionem ſubſtantiæ, et Damnum in Oeconomia minatur, præcipue Mercurialibus, et viris ſenioribus. And his poſition in the full Moone Preventionall in the fifth houſe, Damnum et moleſtiam a liberis nunciat. His poſition in the new Moone Poſtventionall, portends the ſame or rather worſe then that he ſignified in the full Moone Poſtventionall of the Spring, and new Moone Poſtventionall of the Summer.

Mercury, Saturns partner this Quarter in the eighth houſe in oppoſition to Saturne at the Suns ingreſſe to Libra, Multos è uita tollit Infantes; But his poſition at the full Moone preventionall, which is on the firſt of September being in the tenth houſe, Evehit homines Mercuriales ad honores et dignitates, ſed valde timeo Saturnum proditorium, ipſius ſpem ludificantem. At the new Moone poſtventional, which is on the twentieth of September, he is in the fifth houſe in a Trine aſpect of Mars from aery Signes, and Mars is in the ſeven and twentieth of Gemini in the very Horoſcope, which no doubt will raiſe great windes, Et Iuvabit pregnantes facili partu, edentq; partus ſubtilis intellectus, Thus ſaith our Author Haly, in libro et capite prædicto, as for the poſition of Venus in this Quarter, though ſhe have a third part ſhare therein, yet ſhee is very weake, being in her fall and Retrograde, ſignifying that thoſe people and places ſubiect to

Venus shall be in a bad condition: Fœmina nil tacet, nisi quod nescit, And therefore I forbeare to trouble them: For Sublata lucerna nil interest inter mulieres.

Mars as he is Dominus Anni, so is he Particeps hujus Quadraturæ, having a Quartet part therein, he is in conjunction with the Moone in the 24. degrees of Gemini at the Suns ingresse and in the sixth house. Denotans Epidemicas infirmitates, provenientes ex sanguine et ventositate; Servi erunt perfidi et furaces. In the full Moone preventionall he is in the eighth house in a Quartile to both the Luminaries, and Venus, Interfectiones, et interitum multorum perstrangulationem, et interfectores de scipsis præmonstrat. At the new Moone post Ventionall he is in the Ascendent, Malum designans locis et populis subjectis Geminis quod Deus Avertat, I hope the Trine of Mercury to him will abate much of that evill. Quod faxit Deus.

Of the Winter.

WInter takes beginning on Wednesday the eleventh of December 56. minutes past 2. in the morning, At which time the beginning of the malevolent Scorpion is ascending, in the middle whereof is Venus, being in her detriment, hasting to the opposition of Iupiter. The French have a proverbe very fit for this season.

La maison est mal'heureuse, et meschante
Ou la poule plus haut que le Coq chante.

The Moone seperated from a Quartile of the Sun to the opposition of Saturne, which is an argument of the veritie of Astrologie; For this position produceth slabbie and wet weather, which will show it selfe manifestly about the Nativitie of Christ, and some other dayes by me noted in the Almanack, At this time Mars by retrogradation is fallen into an opposition of Mercurie, And indeed Mars by having 33. dignities, is principall Moderatour of the Winters bis position at the Suns ingresse into Capricorne, is in 25. degrees of Gemini in the end of the eighth house, and beginning of the ninth, where he is retrograde, and in opposition to Mercury, Cave ab homine trium literarum, Interfectiones multas denotat et abscisionem manuum et pedum, et vim superationem vilissimam, et Itinera infesta facit, latronibus et praedonibus in quibus multi misere trucidantur.

In the full Moone preventionall the third of December he is in the twelfth house in 28. degrees of Gemini, retrograde, the Moone going from the opposition of the

Sun

Sun to his coniunction, being 7. degrees and 35. minutes under him in respect of latitude, and 5. degrees 25. minutes more neer the South East in respect of longitude, Metum, Anxietatem, et damna multa ab hostibus, et sanguinis effusionem portendit: The seventh of December, there is an opposition of the Sun and Mars at 2. of the clock after noone, And the 13. of December about midnight, there is an opposition of Mars and Mercury: So that the 3. 4. 7. 13. 17. 18. 19. dayes are Dies atri, a dismall and untoward season: So likewise the 24. and 30. For his position at the new Moone Postventionall, which is on the 19. of December, it is not much different from that which was spoken of him in the full Moone Preventionall in the Harvest.

Thus farre out of Haly and other Authentick Astrologicall Authors, concerning the generall state of the foure Quarters of this yeare 1644. much more might be collected and spoken, which at present I forbeare, not weighing those, who either out of ignorance vilifie, or out of malice inveigh against this lawfull & most excellent Art, for it as far exceeds all other humane learning, as the Sun doth the smallest star in heaven. Sapiens Rex Alphonsus dicere solitus fuit, iratis & latrantibus canibus ne mordeant, offulam objiciendam esse. If thou gatherest any good by these collections, give God the praise, and make use thereof to his Glorie: If it offend thee, thou mayest thanke thy selfe: For Quisque Fortunæ suæ Faber, & quas compedes fecit, ipse gestet.

Of Eccliples.

This yeare comes that rule in observation, which Ptolomie sets downe, lib. 6. cap. 6. Almagest: Regiomontanus lib. 3. Propos. 9. Epitom: And that of Kepler lib. 6. Reg. 3. Epitom. Astro. fol. 881. which is thus.

Fieri potest ut Duo novilunia centralia, vel quasi contingant, vnius semestris interstitio vnam ante solis Apogæum, alteram post illud: Quo casu toto anno lunari nullum continget plenilunium Ecliptricum.

The first of these Solar Eclipses happens on the 27. of February this yeare before the Suns Apogæon, and the other the 22. of August after his Apogæon, both within the space of six moneths.

The first of these is Centrall, and the Sun is darkned 12. digits or his whole body, and will appeare of a terrible aspect in the Regions of Peruna, in the South parts of America, in Cambibylcha Gnayra Los Sorar, Los Reyor, in the Iland del Challao, *Saint* Iago, Lima, Paruca, Cusso, la Baranca.

ranca, la Nasca, and in those places neere adioyning to Mar del Sur. And those that are West from us six houres and a half, which as it will not be seene because the Sun in our Horison is quarter of an houre set: but in those places that are in longitude 290. degrees and a half, and in 13. degrees South latitude, it will be in their mid-heaven, and will continue 3. houres and one third part of an houre. It happens with us at 6 a clock at night, but because it cannot be seen by us, I will not mention any further of it.

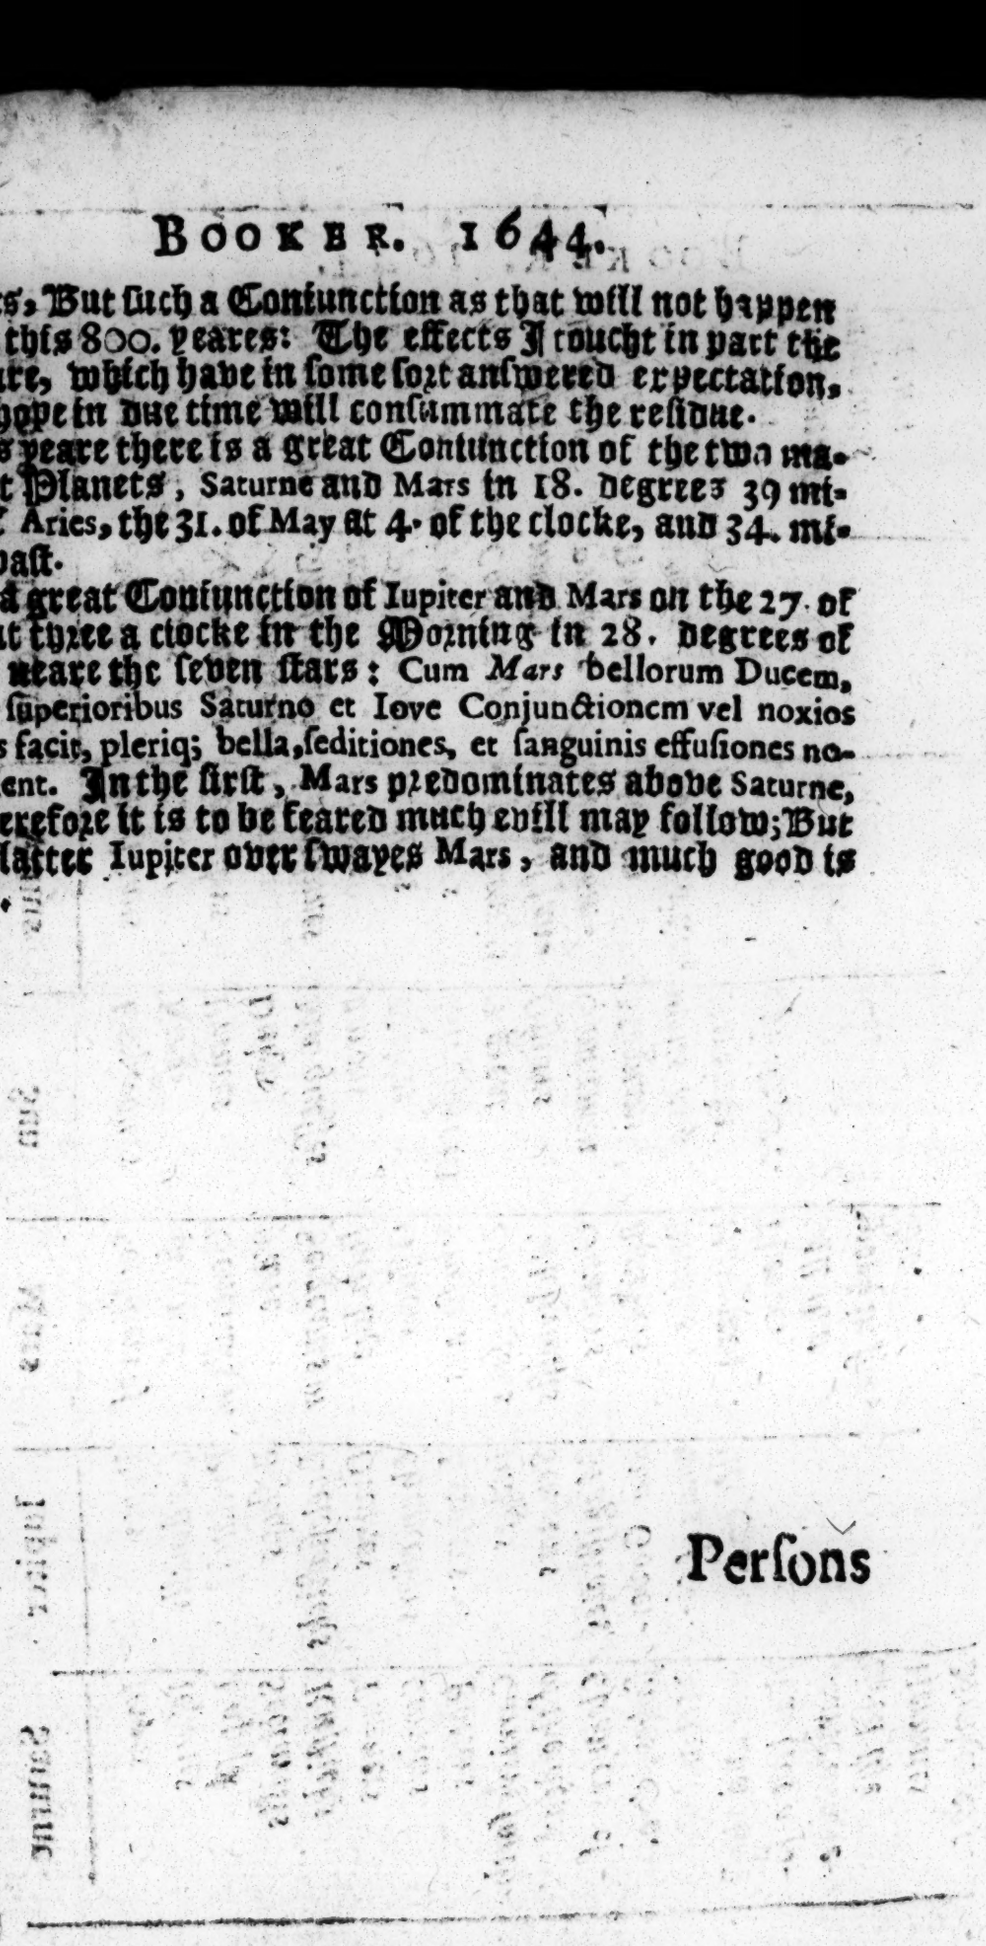

The other Eclipse of the Sun happens to be on Thursday the 22. of August at our five of the clock in the Morning a little before Sun rising; It will not be visible in our Horizon: but those places that lie in 135. degrees of longitude, and 18. degrees of North latitude, shall see the Sun darkned a 11. digitts and a half in their noone sted, Such be the people that live neere the Gulfe of Pengula, Narsinga, Pegu, Iancona, Sian, Southerne parts of China, Cambaia, Chavoia; But they that live in the North parts of America, in Anian, Quivira, in the Illands des Ladrones, and new Guinea, shall see the Sun eclipsed at his setting; It will continue three houres. It were to be wished that those that live in these places would observe these eclipses, I meane Merchants and others that trade thither, and if any of them bear good affection to Astronomie to communicate their observations so thereby they may much increase the knowledge of Astronomie and Geographie.

Of some great Conjunctions which happen this yeare.

THe last yeare I made mention of a great Conjunction of Saturne and Iupiter, on Thursday the 16. day of February, at 17. min. past 4. of the clock in the Morning, many simple people expected then to have seene some strange apparition in the heavens, and foolishly gazed to observe they knew not what. The two Grand planets were so neere the Sun they could not be seene, and when they were visible it was after Sun set; for they were occidentall of the Sun. A day or two before the Conjunction they were perciptible and to be seen immediatly after Sun set by help of a Prospective glasse. That which I mentioned then for, is touching their effects, which will operate through all Christendome, and continue these 20. yeares: for every 20. yeares there is a Conjunction of these two

Planets

nets, But such a Conjunction as that will not happen
ne this 800. yeares: The effects I toucht in part the
yeare, which have in some sort answered expectation,
I hope in due time will consummate the residue.
his yeare there is a great Conjunction of the two ma-
ant Planets, Saturne and Mars in 18. degrees 39 mi-
of Aries, the 31. of May at 4. of the clocke, and 34. mi-
s past.
nd a great Conjunction of Iupiter and Mars on the 27. of
, at three a clocke in the Morning in 28. degrees of
rus neare the seven stars: Cum *Mars* bellorum Ducem,
bus superioribus Saturno et Iove Conjunctionem vel noxios
ctus facit, pleriq; bella, seditiones, et sanguinis effusiones no-
solent. In the first, Mars predominates above Saturne,
therefore it is to be feared much evill may follow; But
he latter Iupiter over swayes Mars, and much good is
ed.

Quis? nisi tu nostræ Gentis, Deus unice tutor.
Qui nos premendos hostibus reliqueras,
Offensus vitijs pravis: nec in Arma ruentes
nostros præibas Dux ut ante exercitus.
Nunc Pater Auxilium rebus bonus adfer in Arctis
Humana fallax, credulos spes decipit:
Te Duce, Victrici decorati tempora lauro,
Pedibus prememus hostis arrogantiam.

A fulgure et tempestate, a plaga et pestilentia fame Bello, latrocinio, et morte subitanea. Ab omni seditione, et conspiratione, a falsis et hæreticis dogmatibus, a duritie cordis et contemptu verbi et mandati tui, Libera nos Domine.

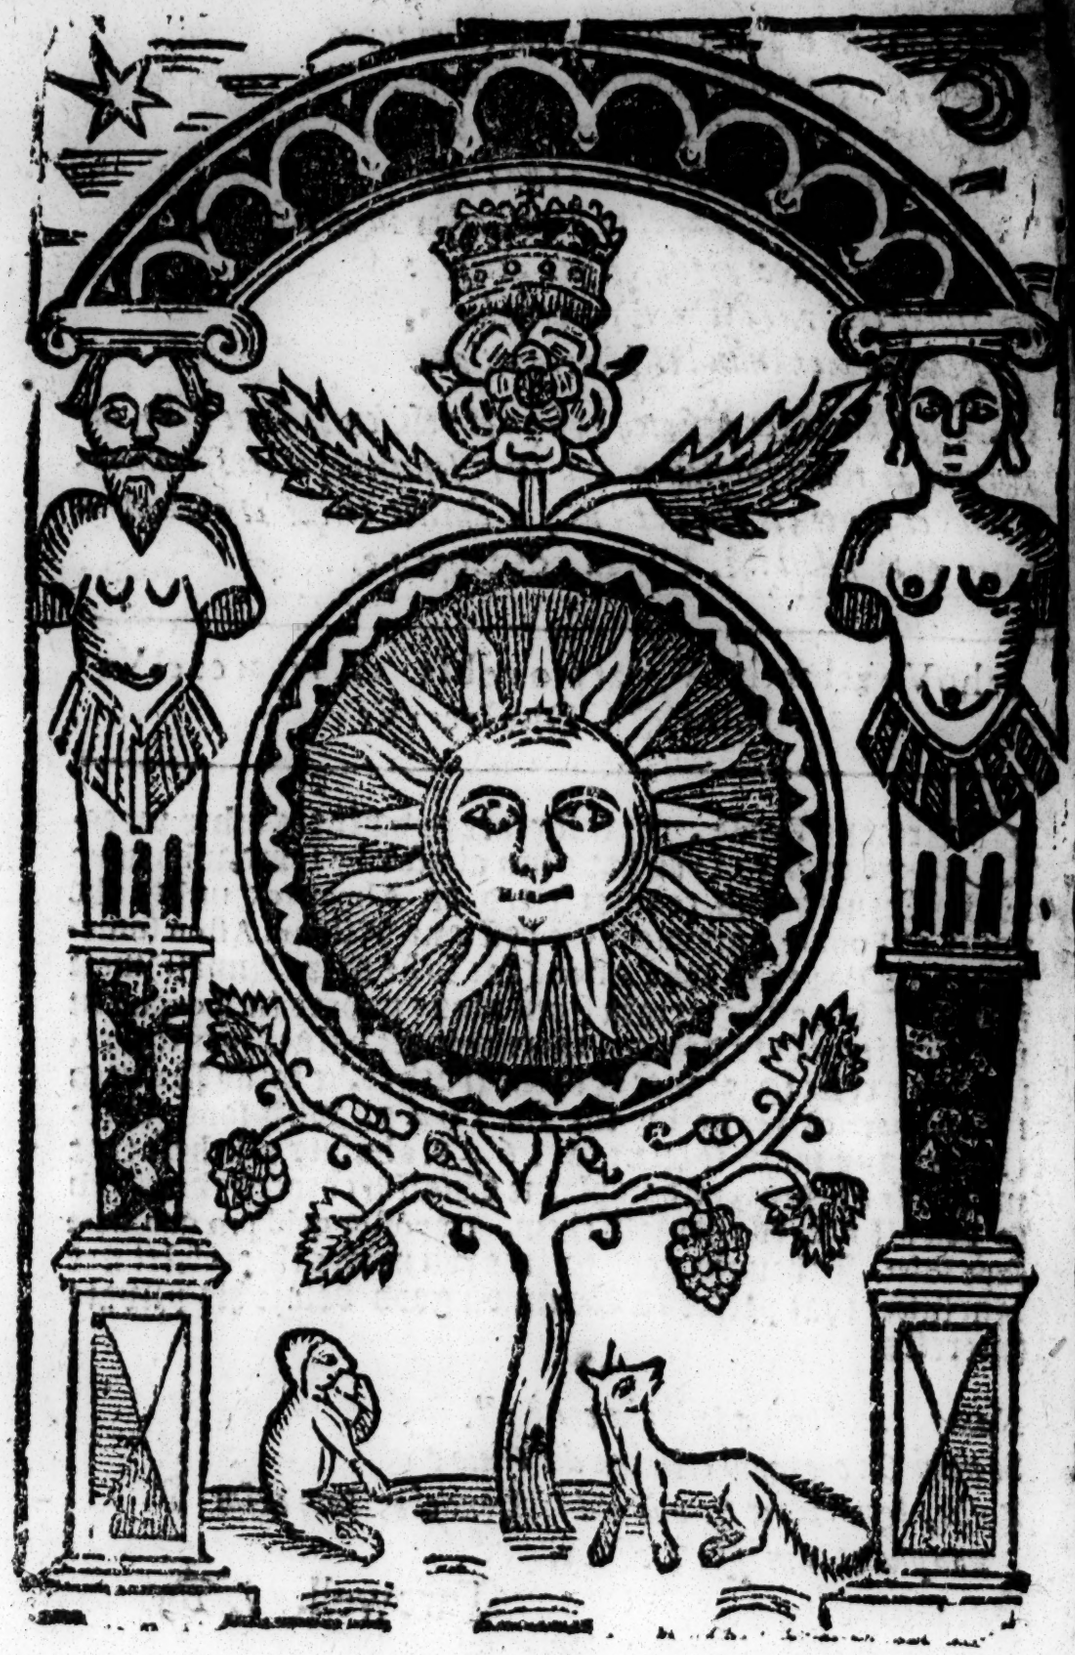

IehoVa zebaoth pVgnat pro nobIs, eXVrgat et elVs InIMICI DIssIpentVr

---

COurteous Reader, the last yeare and divers other preceding, many of you have bin abused by some, who have falsly Printed and counterfeited an Almanack under the name of Booker, amongst the rest one William Aston sometimes a Draper, or Iohn Aston, (for so he stiles himself) most impudently posted certain scandalous papers in London in justification of his doings, thereby more palpably discovering his grosse ignorance; For the truth is, he falsly Printed the Almanack made by me for 1642. with some little change, and made it serve for 1643. abusing all those that made use of them, and in plaine English cheated them, and so did all others that sold them. Impostor quid pro quo dare sæpe solet. I thought good to give you notice thereof, let not him suffer that prefers a Common good before his private interests.

Namq; haud parva Injuria certè est.
Si mihi Calcographi crimîna des Vitio:
Zoilis, Ignaris, et Sciolis alibi respondebo, Iam enim
non placet cum ipsis Delirare.

Farewell. *I. B.*

NSM 3483
